GROWTH OF \$10,000 INVESTMENT Since Inception through March 31, 2022

Performance data quoted represents past performance which does not guarantee future results. The investment return and principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than original cost. Current performance may be lower or higher than the performance quoted. Performance data current to the most recent month-end may be obtained at www.ptam.com or by calling (866) 792-9606. Returns over one year are annualized.

The Fund's investment objectives, risks, charges and expenses must be considered carefully before investing. The summary and statutory prospectuses contain this and other important information about the investment company, and may be obtained by calling 1.877.738.9095. Read carefully before investing.

FUND INFORMATION

Objective: To achieve long-term returns primarily by investing in a portfolio of income producing securities that may have the potential for capital appreciation.

Investment Process: Our expert analysts evaluate bonds by keeping one simple goal in mind—return for our investors. We analyze securities based on their future total return potential and then conduct a robust bottom-up credit screen to assess the bond's potential sustainability and profitability. The result is a portfolio of securities designed to perform well in various interest rate environments over the long term.

GLOSSARY

Alpha measures the difference between a portfolio's actual returns and its expected performance, given its level of risk. The **Bloomberg US Aggregate Bond Index** measures the performance of the investment-grade universe of bonds issued in the United States. The index includes institutionally traded U.S. Treasury, government-sponsored, mortgage, and corporate securities. It is not possible to invest in an index. The **Morningstar Multisector Bond Category** consists of portfolios that seek income by diversifying their assets among several fixed income sectors, usually U.S. government obligations, U.S. corporate bonds, foreign bonds, and high-yield U.S. debt securities. These portfolios typically hold 35% to 65% of bond assets in securities that are not rated or are rated by a major agency such as Standard & Poor's or Moody's at the level of BB (considered speculative for taxable bonds) and below. **Standard Deviation** depicts how widely returns varied over a certain period of time and is used to measure historical volatility. **Sharpe Ratio** is a risk-adjusted measure calculated by using standard deviation and excess return to determine reward per unit of risk. The **30-Day SEC Yield** is computed under an SEC standardized formula based on net income earned over the past 30 days. The **Subsidized** yield, which includes contractual expense reimbursements, would be lower without those reimbursements. The **Unsubsidized** yield excludes contractual expense reimbursements, resulting in a lower yield.

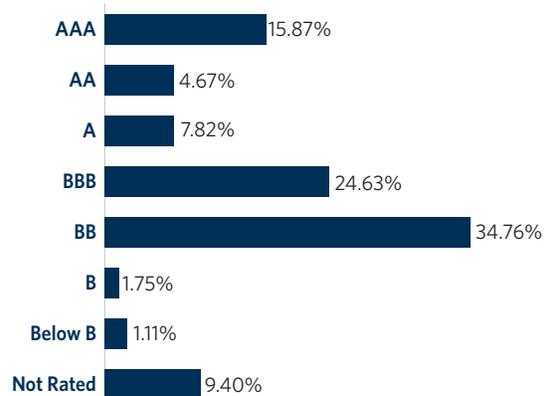

INVESTMENT CONSIDERATIONS

Mutual fund investing involves risk. Principal loss is possible. Investments in debt securities typically decrease in value when interest rates rise. This risk is usually greater for longer-term debt securities. Investments in lower rated and non-rated

PORTFOLIO COMPOSITION

CREDIT QUALITY

The credit quality of the securities in a portfolio is assigned by a nationally recognized statistical rating organization (NRSRO) such as Standard & Poor's, Moody's, or Fitch, as an indication of an issuer's creditworthiness. Ratings range from 'AAA' (highest) to 'D' (lowest). Bonds rated 'BBB' or above are considered investment grade. Credit ratings 'BB' and below are lower-rated securities. High yielding, non-investment-grade bonds involve higher risks than investment-grade bonds. Adverse conditions may affect the issuer's ability to pay interest and principal on these securities.

securities present a greater risk of loss to principal and interest than higher-rated securities. Investments in asset-backed and mortgage-backed securities include additional risks that investors should be aware of such as credit risk, prepayment risk, possible illiquidity and default, as well as increased susceptibility to adverse economic developments. Investments in Real Estate Investment Trusts (REITs) involve additional risks such as declines in the value of real estate and increased susceptibility to adverse economic or regulatory developments. Derivatives involve investment exposure that may exceed the original cost and a small investment in derivatives could have a large potential impact on the performance of the Fund. Options and Swap positions held in the Fund may be illiquid and the Fund manager may have difficulty closing out a position. Diversification does not assure a profit or protect against a loss in a declining market. Income from tax-exempt bonds may be subject to state and local taxes and a portion of income may be subject to the federal alternative minimum tax for certain investors. Federal income tax rules will apply to any capital gains distributions.
